

OVERVIEW

Introducing the Quantum18 High Gain Dual (HGD) 1.8GHz System Amplifier, a comprehensive solution for improving signal quality in a CATV network. Designed to amplify and maintain signal, this robust device meets and surpasses industry performance requirements, setting a new standard for all CATV networks.

Superior Performance: Meets and exceeds the SCTE 279 2022 standard for 1.8GHz amplifiers, featuring the latest gain block technology.

- Unparalleled performance and steadfast reliability, synced with the most recent industry benchmarks.

Easy Replacement: Designed to drop into GainMaker SA Housings without requiring modification or replacements with other products.

- Seamless integration with legacy back housings ensures budget-friendly upgrades and swift replacements, minimizing network interruptions.

Modular Design: Equipped with field-upgradable diplex filters.

- Provides flexibility for future spectrum expansions, ensuring long-term utility without frequent hardware changes.

Advanced Electronic Control and Monitoring: Delivers dual-mode access through local wireless and remote management, streamlining configuration and oversight.

- Elevates operational dynamics by simplifying setup, meticulous change logging, vigilant equipment surveillance, and hassle-free troubleshooting.

Supports DOCSIS® 4.0 and 10Gbps Downstream Data

Rates: Engineered to support the latest DOCSIS® 4.0 and full 10Gbps downstream data rates.

- Future-proofs your cable network, ensuring compatibility with upcoming technological advancements and increasing network demands.

Unless indicated differently, our specifications reflect typical performance and are referenced to 68°F (20°C). The measurements employed in determining these specifications adhere to the globally recognized SCTE/ANSI standards, when relevant, utilizing standard frequency assignments.

Note:

1. We specify the output tilt as "LINEAR" tilt (not "cable" tilt).
2. Forward gain and noise figures were measured with an equivalent 0 dB input EQ and 1 dB input pad setting.
3. Down tilt, an effect of cable, is denoted by a (-). Up tilt, an effect of equalization, is denoted by a (+).
4. Performance specified for 204MHz split.
